

Otto

The interface layer between humans and physical environments

- From instructions → to outcomes
- Camera-first decision system

Problem

- Guests don't understand appliances in rentals
- Instructions are ignored or missing
- Hosts waste time on repetitive support
- Negative reviews stem from avoidable confusion

Insight

People don't want instructions. They want outcomes.

- Not: how does this work?
- But: how do I get this done?
- The real gap is decision support in physical environments

Solution

- QR → Camera opens instantly
- User points at device
- System understands + decides + guides
- No app, no search, no friction

System Architecture

- Input layer (camera + QR + context)
- Perception layer (vision AI)
- Context layer (property + memory)
- Decision engine (core logic)
- Action layer (task completion)

Why Now

- Vision AI is finally reliable
- AI reduces interface complexity
- Users expect instant outcomes
- Apps are being replaced by intent systems

Market

- Beachhead: Amsterdam short-term rentals
- ~30M global listings
- High willingness to pay for operational efficiency
- Expansion: hotels, property managers, offices

Business Model

- B2B SaaS per property (€19–€99/month)
- Avg: ~€40/month
- LTV ~€1,300
- CAC target < €200
- Future: platform + integrations

Technology

- Vision AI for object detection
- Context + memory system
- Deterministic decision engine
- Action orchestration layer
- AI used for language, not logic

Go-To-Market

- Start in Amsterdam
- Direct outreach to Superhosts
- Host communities + property managers
- QR placement = distribution channel

Vision

- From rentals → to physical environments
- From instructions → to actions
- From apps → to systems
- Otto becomes interface layer for the real world
